

The new sweet pepper Cubo Yellow is a variety for professional green- house cultivation. The shining yellow pepper is the result of a many years of breeding works carried out by ReinSaat. This enabled the development of an open-pollinated blocky pepper whose shape, yield and quality corresponds to the requirements of the professional market. Cubo Yellow forms beautiful, thick-fleshed fruits which ripen from green to yellow and have a pleasantly fruity taste. With their attractive and broad blocky shape, they are perfect fruits to be marketed directly at the fresh market. With their outstanding taste they are also excellently suited for processing, e.g. as a pepper for pickling.

The plants produce high yields and are characterized by a stable growth up to a height of 1.2 m.

Fact sheet:

| | |
|--------------------|---|
| Growth: | bushy up to about 1,2m |
| Fruit shape: | broad blocky |
| Fruit size: | about 10/9 cm |
